

Motor vehicle crashes are the leading cause of injury-related death among children. Child safety seats, booster seats, and safety belts, when installed and used correctly, can prevent injuries and save lives. Young children correctly restrained have an 80 percent better chance of survival than those who are unrestrained.

Over 80% of child safety seats are not used properly! That is why Saint Luke's Health System Certified Child Passenger Safety Technicians have regularly scheduled inspection times open to the community.

Our goal is to help parents and caregivers learn to install and use their child's safety seat/booster seat properly. To make an appointment or for questions, call NurseLine 816-932-6220.
